

Technical Datasheet UK

Semi-Automatic Bollard System Type Cullian

1. Product overview

The Cullian bollard system serves as an adjustable anti-ram and security barrier. It is a mechanical, non-powered closure system designed for collection security, site security, object protection, parking lot closures, traffic flow management, and resilience enhancement for enterprises.

2. Technical details

2.1 Dimensions

- Diameter: 114 millimeters
- Height above ground: 670 mm
- Installation depth: 960 mm
- Weight: 56 kilograms
- Wall thickness 9 mm (Steel)

2.2 Materials

- Material: hardened steel (BS 1440)
- Surface: Electro-galvanized and finished

2.3 Structural efficiency

- Load capacity: appropriate for guiding light to heavy vehicles with anti-ram features.
- Vandalism resistance: the design does not encourage tendencies for vandalism and aggression.

2.4 Ministry

- Operation type: entirely manual
- Pull-out weight: 7 kg.
- Locking: by pressing the cylinder lock located at the top.
- Unlocking: by rotating the 10-pin security key located on the top.
